

Practical AEG Upgrade 2015 Edition

Short for automatic electric gun, AEG is a type of battery powered air gun capable of full & semi auto firing. An electric motor inside the AEG rotates a series of gears sequentially to drive the piston, which in turn compresses the spring. When the spring is released, the piston is being pushed forward to produce compressed air and propel the bullets. Due to such a complex internal structure, power upgrade is never easy. There is no substitute for good old fashioned know how. By upgrading the gun yourself, you are knocking out the hardest part of it first, knowing what goes where. The 2015 Edition of this book presents new concepts and practical skills reflecting the latest changes and trends in the airsoft industry. New technologies such as Electric Blowback EBB and Electric Recoil Gun ERG are also included in the coverage.
