

# Nano Technology Development

Your author decided to write this book about NanoTechnology after being reminded of the fantastic developments of Professor Richard P Feynman who was a professor at Caltech while your author was a physics student earning his BS there between 1947 and 1951. I started studying the pioneering research of Dr. Feynman after being reminded of his famous lecture titled: There's Plenty of Room at the Bottom. This discourse was presented at an American Physical Society meeting at Caltech on December 29, 1959. Feynman considered the possibility of direct manipulation of individual atoms as a more powerful form of synthetic chemistry than the methods used at the time. This became nanotechnology.
