

Web Services Research and Practices (Advances in Web Services Research)

Web services is rapidly becoming one of the most valued aspects of information technology services, as Web-based technological advancements continue to grow at an exponential rate. Web Services Research and Practices provides researchers, scholars, and practitioners in a variety of settings essential up-to-date research in this demanding field, addressing issues such as communication applications using Web services; Semantic services computing; discovery, modeling, performance, and enhancements of Web services; and Web services architecture, frameworks, and security.
