

How to Help a Child Cope with Grief: A Book for Adults Who Live and Work with Bereaved Children

Coping with grief is difficult enough for anyone, but for children it can be more than just difficult. Far too often, dealing with the real issues facing bereaved children has been left neglected because of the natural tendency by adults to try to protect the child thereby creating superficial ways of dealing with the true physical, emotional and behavioral effects that grief can have on a child. This book is a practical guide that will help parents and teachers recognize the signs, identify with the real issues and provide the child with the long lasting help the child actually needs.
