

Antiepileptic Drug Development (Advances in Neurology)

This is a comprehensive, critical review of the design, implementation and analysis of multicentre clinical trials for new antiepileptic drugs. Featuring contributions from academic investigators and representatives of pharmaceutical companies, the National Institutes of Health, and the US Food and Drug Administration, it provides insights into the theoretical and practical issues involved in preclinical drug development, phase I and phase II clinical trials, clinical trials for special patient populations, and postmarketing studies.
